

Dependable Computing - EDCC 2005: 5th European Dependable Computing Conference, Budapest, Hungary, April 20-22, 2005, Proceedings (Lecture Notes in ... / Programming and Software Engineering)

It is always a special honor to chair the European Dependable Computing Conference (EDCC). EDCC has become one of the well-established conferences in the field of dependability in the European research area. Budapest was selected as the host of this conference due to its traditions in organizing international scientific events and its traditional role of serving as a meeting point between East and West. EDCC-5 was the fifth in the series of these high-quality scientific conferences. In addition to the overall significance of such a pan-European event, this year's conference was a special one due to historic reasons. The roots of EDCC date back to the moment when the Iron Curtain fell. Originally, two groups of scientists from different European countries in Western and Eastern Europe who were active in research and education related to dependability created a joint forum in order to merge their communities as early as in 1989. This trend has continued up to today. This year's conference was the first one where the overwhelming majority of the research groups belong to the family of European nations united in the European Union. During the past 16 years we observed that the same roots in all the professional, cultural and scientific senses led to a seamless integration of these research communities previously separated artificially for a long time. EDCC has become one of the main European platforms to exchange new search ideas in the field of dependability.
