

Windows Script Host

Written for system and network administrators, Windows Script Host includes authoritative coverage of the VBScript language essentials, including script structure and statements; detailed discussion of the object-oriented paradigm, how it is used in Windows system scripting, and how to employ COM objects; program guides that provide additional insight for those who are new to programming; and proven, ready-to-use scripting solutions, including sample logon and system management scripts. If you design or administer Windows NT/2000 networks, this is an essential resource to help you implement system scripting across your network. This comprehensive reference will help you: install system scripting components on your network; automate or simplify system management tasks, ranging from copying files to monitoring a set of enterprise servers; create your own COM objects in VBScript through the use of Windows Script Components; and get immediate results by employing proven sample scripts.
